Simplify your network

Why do you need multiple connections for all your services when one will do? Are you overwhelmed by the day-to-day technical and administrative burden placed upon your staff by different, disparate connections and networks? Smart Network is your answer.

a Smart Network consolidates all your services

KEY FEATURES & BENEFITS

A Smart Network allows you to use multiple services over a single connection, while using secure VLANs to split the circuit. The benefit is the consolidation of voice, video, telephony, and data services meaning you get a flatter, simpler, and easier-to-manage network.

SIMPLE

A smart network provides business grade, end-to-end fibre connectivity and nothing less. Connect with a simple plug and play installation process that reduces switching costs, and the technical and administrative burden.

FLEXIBLE

One of the primary challenges for IT departments is in upgrading existing infrastructure. Smart Networks have the flexibility & extensibility so that if your organisation grows, your network has the scalability to grow with you.

SECURE

Enjoy peace of mind with secure private virtual cloud. Mitigate both cost challenges and migration risks with flexibility and ensure business-critical functions stay online around the clock with high availability backed by SLAs.

What can we do for you?

Serviceteam IT draws upon over 20 years of experience to design and deliver bespoke connectivity, network, and telecoms solutions for your organisation.

Serviceteam IT design and deliver sophisticated connectivity, network, and telecoms solutions. We get to know our clients inside out so we can design custom solutions with a single point of contact for delivery and management.

The objective is to simplify your business environment into an intuitive user friendly one where owners and senior managers have an understanding of their IT eco-system and are comfortable that it is supporting the business.

It is our ambition to remove the mystery that surrounds IT and Communications so you have a clear understanding of what you are purchasing, why you are purchasing it and what benefits it will bring you.

This allows us to make the right recommendations to our customers to ensure that their IT and Communications is supporting their business strategy. Our services and solutions methodology exists to enable your IT and com-

munications consumption to find the best fit for your organisational needs, supporting your objectives, delivering value, and focusing on results.

If you would like additional information or would like to speak to someone about how you can benefit from a Smart Network, there are a number of ways to contact us:
